

GreenAction Utah supports the following:

### **Nuclear Contamination**

We strongly oppose current energy policies which continue producing nuclear wastes which can not be stored safely and propose the following:

- Immediate halt mining of uranium, most of which occurs on indigenous lands here and on other continents.
- Halt all U.S. research and development of new weapons systems, and continue dismantling existing stocks.
- Stop U.S. involvement in international proliferation of nuclear weapons, and sign a meaningful Comprehensive Test Ban Treaty.
- Adopt a policy for the safest possible storage of existing radioactive materials, and discontinue attempting their “disposal” in land repositories.
- Rapidly phase out production of electric power from nuclear sources, and oppose the National Energy Plan’s call for construction of hundreds of new nuclear plants.
- Ban shallow land disposal and incineration of all radioactive wastes.
- Hold all nuclear producers responsible in perpetuity for wastes they generate.
- Establish strong, enforceable penalties for radioactive contamination of the environment.
- Establish independent monitoring networks for all military and civilian nuclear facilities.
- Ban irradiation of food products.
- Ban nuclear materials in international transportation and trade.
- Ban nuclear materials aboard craft launched into space.
